

Firestore LMS Guide for Beginners

This guide will help you manage and view your student data (exams, results, and enquiries) in the Firestore Console.

Step 1: Access the Console

Go to: <https://console.firebase.google.com/>

Log in with the Google account associated with your VocSkill project.

Step 2: Select Your Project

Click on the project tile named "vocskill-1bfe7".

Step 3: Open Firestore Database

On the left-hand sidebar menu, click on "Build" and then select "Firestore Database".

Step 4: Understand the Collections

You will see four main collections where your data is stored:

- **attempts:**

Records of every student who takes an online exam, including their score and pass status.

- **certificates:**

A list of all certificates issued to students who passed their exams.

- **enquiries:**

Leads from your contact form and offline college inquiries.

- **purchases:**

Records of course enrollments and payments.

Step 5: Verifying New Data

The website is now set up to "Sync" automatically. Whenever someone finishes an exam on the website, a new document will appear in the "attempts" collection instantly.

Final Note: If you do not see any collections yet, it means no one has taken an exam or filled a form since the integration was created today.
